

Bug 1: Email Maximum Length Not Enforced

Bug ID: BUG_EMAIL_001

Title: Email field does not enforce maximum length restriction

Module: Email Input / Registration

Severity: Medium

Priority: High

Description:

The email input field does not restrict maximum character length, allowing excessively long email entries.

Steps to Reproduce:

1. Navigate to Email input screen
2. Enter an extremely long email address (e.g., 300+ characters)
3. Click Continue / Submit

Expected Result:

- System should enforce maximum email length validation
- Error message should be displayed or input should be restricted

Actual Result:

- System accepts long email input without restriction

Status: Open

Bug 2: Email Field Case Sensitivity Issue

Bug ID: BUG_EMAIL_002

Title: Email field is treating email addresses as case-sensitive

Module: Email Authentication

Severity: Medium

Priority: High

Description:

Email addresses are being treated as case-sensitive, which is incorrect behavior for standard email validation.

Steps to Reproduce:

1. Enter email in uppercase (e.g., TESTACCOUNT@DOMAIN.COM)
2. Proceed with registration/login

Expected Result:

- Email should be treated as case-insensitive
- Uppercase and lowercase emails should be considered same

Actual Result:

- System treats differently or rejects uppercase email

Status: Open

Bug 3: OTP Verification Infinite Loading on Invalid OTP

Bug ID: BUG_OTP_001

Title: OTP verification screen shows infinite loading for invalid OTP

Module: OTP Verification

Severity: High

Priority: Critical

Description:

When an invalid OTP is entered, the system enters an infinite loading state instead of showing an error message.

Steps to Reproduce:

1. Enter incorrect OTP
2. Click Verify

Expected Result:

- Error message should be shown (e.g., "Invalid OTP")
- User should remain on OTP screen

Actual Result:

- App shows infinite loading spinner

Status: Open

Bug 4: Navigation Skips Pages on Back/Forward Actions

Bug ID: BUG_NAV_001

Title: Form navigation skips screens when using back and forward

Module: Form Navigation

Severity: High

Priority: High

Description:

User is able to skip intermediate form pages by navigating back and forward, causing incorrect flow progression.

Steps to Reproduce:

1. Start registration form
2. Move to next screen
3. Use back and forward navigation multiple times

Expected Result:

- User should follow linear step-by-step flow
- Skipping steps should not be allowed

Actual Result:

- App skips intermediate pages

Status: Open

Bug 5: App Crash on Juvenile Face Liveness Flow

Bug ID: BUG_JUV_001

Title: App crashes when Juvenile = No and face liveness prompt reappears

Module: Juvenile Verification / Liveness Check

Severity: Critical

Priority: Critical

Description:

When “No” is selected for Juvenile ID card, the app crashes after re-triggering face liveness verification.

Steps to Reproduce:

1. Select Juvenile ID Card = No
2. Proceed in flow
3. Face liveness prompt appears again
4. Continue process

Expected Result:

- App should continue flow without crash
- Proper handling of liveness step

Actual Result:

- App crashes

Status: Open

Bug 6: Branch Search Allows Invalid Input and Still Proceeds

Bug ID: BUG_BRANCH_001

Title: Branch selection allows free text input and user can proceed

Module: City/Branch Selection

Severity: High

Priority: High

Description:

User can type custom values in city/branch search field and still proceed without selecting a valid dropdown option.

Steps to Reproduce:

1. Go to branch selection screen
2. Type random text in search field
3. Do not select from dropdown
4. Click Continue

Expected Result:

- Only valid dropdown selection should be allowed
- Free text should be rejected

Actual Result:

- System allows user to proceed with invalid input

Status: Open

Bug 7: City Search Allows Invalid Input and Incorrect Progression

Bug ID: BUG_CITY_001

Title: City search field allows free text input and does not enforce valid selection

Module: City Selection / Dropdown

Severity: High

Priority: High

Description:

The city search field allows users to enter arbitrary text instead of selecting a valid city from the dropdown list. The system allows progression even when no valid city is selected.

Steps to Reproduce:

1. Navigate to City selection screen
2. Type random or invalid text in city search field (e.g., "abcdxyz")
3. Do not select any option from dropdown
4. Click Continue / Next

Expected Result:

- User should only be able to proceed after selecting a valid city from dropdown
- Invalid/free text input should not be accepted

Actual Result:

- System allows free text input
- User is able to proceed without valid city selection

Status: Open
